Pages C658–C674: C. K. Sole and J. J. Wine, “Swelling-induced and depolarization-induced Cl⁻ channels in normal and cystic fibrosis epithelial cells.” Page C672, four lines were dropped in printing from the top of the left-hand column; they should read as follows: with time as a cell is perfused with standard saline containing 10 mM EGTA. Conversely, the current is probably also not due to a simple disinhibition by a diffusible factor because activated channels can be read. Note: at the bottom of the right-hand column, four lines have been repeated.
