EDITORIAL

Omic and Systems Biology Approaches in Neurodegenerative Diseases
Multi-omics and Alzheimer’s disease: a slower but surer path to an efficacious therapy?
S. W. Pimplikar

THEME

Omic and Systems Biology Approaches in Neurodegenerative Diseases
Applying fluid biomarkers to Alzheimer’s disease
H. Zetterberg

RESEARCH ARTICLES

Cell-to-Cell Communication and Signaling Pathways
MiR-9-5p promotes MSC migration by activating β-catenin signaling pathway
X. Li, L. He, Q. Yue, J. Lu, N. Kang, X. Xu, H. Wang, and H. Zhang

Regulation of Cell Signaling Pathways
Balance between S-nitrosylation and denitrosylation modulates myoblast proliferation independently of soluble guanylyl cyclase activation
A. M. S. Yamashita, M. T. C. Ancillotti, L. P. Rangel, M. Fontenele,
C. Figueiredo-Freitas, A. C. Possidonio, C. P. Soares, M. M. Sorenson,
C. Mermelstein, and L. Nogueira

Melamine induces Ca^{2+}-sensing receptor activation and elicits apoptosis in proximal tubular cells

ENaC activity is regulated by calpain-2 proteolysis of MARCKS proteins
D. S. Montgomery, L. Yu, Z. M. Ghazi, T. L. Thai, O. Al-Khallili, H.-P. Ma,
D. C. Eaton, and A. A. Alli

Ablation of SIP3 receptor protects mouse soleus from age-related drop in muscle mass, force, and regenerative capacity
M. Bondì, E. Germinario, M. Pirazzini, G. Zanetti, F. Cencetti, C. Donati, L. Gorza,
R. Betto, P. Bruni, and D. Danieli-Betto

(Continued)
Airway epithelial anion secretion and barrier function following exposure to fungal aeroallergens: role of oxidative stress
N. A. Zaidman, K. E. O’Grady, N. Patil, F. Milavetz, P. J. Maniak, H. Kita, and S. M. O’Grady  C68

Primary cilia control the maturation of tubular lumen in renal collecting duct epithelium
T. Ernandez, O. Komarynets, A. Chassot, S. Sougoumarin, P. Soulié, Y. Wang, R. Montesano, and E. Feraille  C94

FXYD5 (dysadherin) may mediate metastatic progression through regulation of the β-Na⁺-K⁺-ATPase subunit in the 4T1 mouse breast cancer model
I. Lubarski-Gotliv, K. Dey, Y. Kuznetsov, V. Kalchenco, C. Asher, and H. Garty  C108

CFTR-mediated anion secretion across intestinal epithelium-like Caco-2 monolayer under PTH stimulation is dependent on intermediate conductance K⁺ channels
W. Jantarajit, K. Lertsuwan, J. Teerapornpuntakit, N. Krishnamra, and N. Charoenphandhu  C118
